

The Infiltration/Inflow efforts are Paying Off!

96% of properties have completed the necessary work per the ordinance

Estimated % of total sewer flow that consisted of clean water (I/I) during peak flow conditions

- 2014 – 61%
- 2015 – 42%
- 2016 – 29%

City Efforts:

- Replaced 1,500 feet of clay tile sanitary sewer mains that were susceptible to significant Infiltration.
- Inspected all of the Sanitary Sewer Manholes in Foley to Identify potential I/I Issues
- Replaced or Repaired 15 manholes that were allowing infiltration.
- In 2018, the City of Foley plans to replace another 2,300 feet of clay tile sanitary sewer mains.

These reduced sewer flows equal savings for the City of Foley and its Residents, now and into the future.
